

# Bird Netting

**Keeps them out**

Our imported flame resistant bird netting can be installed over windows, courtyard openings, vents, wherever birds are getting through to get inside your building.

The nets are black for limited visibility and for U.V. protection from our strong African sun.

Our imported nets are made of individually knotted strands of polyethylene material which make up an ultra strong net.

Pre-cut to a convenient size of 7.6 meters square.

Easy to install.

We can also supply locally made un-knotted bird netting, in widths of 4.5 meters (stretchable) in lengths of up to 50 meters. These nets are made of strong nylon material.

**Supplied by Pigeon Control Services cc**
